

HARDCODERS PRESENTS

Sense the collision before it lands.

Spidey Sense combines live team presence with truthful repository intelligence—so agents coordinate before changes collide.

BROWSER-FIRST

NO-EGRESS GRAPH

VERIFICATION BUILT IN

GRAPH IS EVIDENCE, NOT AN ORACLE

THE COORDINATION BLIND SPOT

Agents move fast. Context does not.

Modern teams have three fragmented truths—and collisions happen in the gaps.

01

Human intent

Who owns the mission? What outcome is expected?

02

Agent activity

Who is online? Which task is active or blocked?

03

Code structure

Which files and symbols are actually connected?

A static dependency graph alone cannot see runtime dispatch, generated code, reflection—or team intent.

THE PRODUCT

One coordination loop. Four decisive moments.

Every surface shares the same live plan and the same evidence contract.

The output is not “trust the graph.” It is: here is the evidence class, the caveat, and the safest next verification.

CONNECTION-FIRST EXPERIENCE

Real teammates. Zero invented identity.

Create and join entirely through the website; browser capability boundaries stay explicit.

1. CONNECT TEAM

2. PLAN & ASSIGN

3. GRAPH SPACE

LIVE ACTIVITY

REFRESH EVIDENCE

SECURE TEAM PRESENCE

Enter the signal room.

Create the shared room as lead, or join with an invite. Identity and role are entered by you; the browser runtime is detected and reported exactly as browser presence.

TRANSMITTED

NEVER COLLECTED

Name · role · mission · blocker · presence

Prompts · reasoning · terminal · file contents · secrets

CREATE ROOM

JOIN INVITE

01 CONNECTION PROTOCOL

Open a team room

TEAM NAME

HardCoders Graph Room

MISSION OBJECTIVE

Coordinate changes across the Anchor platform with verifiable Graph evidence.

YOUR NAME

Preethesh

YOUR ROLE

JOIN TEAM ROOM

PRIVATE INVITE FRAGMENT

SCOPED CREDENTIALS

NO TERMINAL ONBOARDING

Names and roles are entered by people. Provider details are detected
—never fabricated.

DYNAMIC ORCHESTRATION

Presence becomes actionable.

Authenticated members enter the plan by stable server-issued identity—not fragile display-name matching.

1. CONNECT TEAM

2. PLAN & ASSIGN

3. GRAPH SPACE

LIVE ACTIVITY

REFRESH EVIDENCE

STEP TWO

Plan and assign

Every authenticated teammate in the live room is assignable by stable member ID. Declare source targets precisely; Graph relationships remain evidence and verification stays visible.

6 ASSIGNABLE PEOPLE2 ONLINE NOW4 MISSIONS

Evolve corridor quote construction	Deepthi · online	apps/api/src/tx/quote.ts	Remove
Change fee and rate composition while preser	Active	buildQuote	
Integrate payment quote orchestration	Payments Runner	apps/api/src/payments/service.ts	Remove
Consume executable quote behavior inside th	Active	PaymentService.quote	
Harden API route contracts	Assurance Runner	apps/api/src/routes/index.ts	Remove
Keep public route wiring aligned with payment	Queued	registerRoutes	

LIVE

Connected teammates become assignable immediately.

PRECISE

Mission, owner, state, file, and symbol stay editable.

DYNAMIC

No fixed people, paths, providers, or mission count.

GRAPH-POWERED EXPERIENCE

A spatial map with an honesty layer.

CONFIRMED

HEURISTIC

INCOMPLETE

Mission nodes, source evidence, relation strands, and risk signals share one accessible SVG scene.

TRACK 2 REQUIREMENT

Confidence changes the decision.

The product never turns an incomplete static relationship into a certain runtime claim.

CONFIRMED

Exact / package / import-bound structural evidence

May support BLOCK when direct

Inspect source before merge

HEURISTIC

Inferred, pattern, co-change, framework or test evidence

REVIEW

Validate call sites + focused tests

INCOMPLETE

Partial snapshot, parser failure, dropped support

REVIEW — never certainty

Runtime registration + source/test verification

ABSENCE OF EVIDENCE $\neq$ EVIDENCE OF INDEPENDENCE

RUNNING PROOF, NOT SYNTHETIC CLAIMS

Mapped against HardCoders_.

The live production build analyzes the Anchor repository and preserves every detected limitation.

4,631

INDEXED NODES

14,850

GRAPH RELATIONS

01

ANALYSIS WARNING

02

PARTIAL FAILURES

Why the red matters

SQL parser failures and dynamic behavior lower confidence globally. Spidey Sense surfaces that state, downgrades claims, and points to source/test verification.

TRUTH OVER THEATER

PRODUCTION ARCHITECTURE

Shared presence. Local code intelligence.

The boundary is deliberate: team metadata can travel; repository analysis remains no-egress.

**TRANSMITTED**

Name • role • mission • blocker • bounded activity

NEVER COLLECTED

Prompts • reasoning • terminal • file contents • secrets

127.0.0.1 stays local. Cross-machine deployments require a reachable HTTPS origin or an explicitly controlled LAN binding.

THE ASK

Don't trust the map. Use it to verify faster.

Judge the complete loop live:

- 01 Create a room
- 02 Join from another browser
- 03 Assign a live teammate
- 04 Inspect Graph evidence
- 05 Refresh and verify
